

Remarks:

In response to the communication received 4/13/2005:

1. The claims have been renumbered in accordance with 37 CFR 1.126, whereby the new claims have been numbered consecutively beginning with the number next following the highest numbered claims previously presented. Since claims 4-8 have not been entered, the new claims presented here were numbered starting with the number 9.
2. Claim 8 has been canceled, therefore action 2 no longer required a response.
3. Claims 4-7 have been canceled, but a response will be included nonetheless. These claims have been rewritten in a fashion that complies with Claim Rejection 3. The claims are no longer in a narrative form and contain a structured description of the components of the device. These claims are presented in one sentence form and present a complete operating device.

4. The invention presented herewith has not been described in any previous patents in the same fashion. This invention has not been known or used in this or any other country under the same conditions as described and has never included the same components.

5. Although claims 4-7 have already been canceled, in patent #6.594,917, Ricco does not make any mention of an air-conditioning system. He does however make mention of an air-conditioning device. The difference between the two is that a device is a single mechanism functioning completely independently, whereas a system contains other mechanisms functioning together to output a result.

6. Again, although claims 4-7 have already been canceled, in patent #3,273,264, Farinello does not make any mention of an air-conditioning system. He does however mention an air-conditioning mechanism, which is again a single part working completely independently, whereby a system contains other mechanisms functioning together to produce a viable output.

7. No response on my part is required to this section.
